Specification technique

CONTENT STUDIO FEATURES

Content Studio is where presentations come to life. Create and edit presentations using this intuitive and flexible tool.

Unified view:

All software functions are available from the Hub. Set up display information, create content presentations and schedule playlists all from one window.

Font Support:

Support for local True Type fonts and Daktronics Venus fonts, giving product users more options for content creation.

Auto-Configure Displays:

Auto scan for all displays located on the network, making display configuration a snap.

Transitions:

Entry effects that allow smooth change between layouts.

User Authentication:

Provides security for users by enabling password protection before gaining access to Venus 1500 software.

Scrolling Text:

Customize the placement, direction and speed of text scrolling across the display.

Advanced Scheduling:

Provides security for users by enabling password protection before gaining access to Venus 1500 software.

Importable File Types:

The following file types can be imported into Venus 1500 v4:

.avi, .mpg, .mp4 animation (video) files

.psd, .png, .bmp, .gif, .jpg, .tif and .tiff graphic (still) files

Create and Preview Content:

Quickly and easily manage your schedule by grouping presentations, naming playlists and color-coding schedules.

Storyboard Editor:

A view of all layouts allows the user to easily switch the order of layouts within the presentation.

Zoning Configuration:

Control of limiting display functions to suit local sign regulations.
